

1 **WHAT IS CLAIMED IS:**

2 1. A head of a power ratchet tool having a handle and a ratchet
3 mechanism with a stub, the head comprising:

4 a head portion for receiving the ratchet mechanism and having

5 a front end;

6 a rear end;

7 a top;

8 a bottom;

9 a periphery;

10 an inner space defined between the top and the bottom to receive
11 the ratchet mechanism of the power ratchet tool;

12 a mouth defined in the front end and communicating with the
13 inner space to form two side walls between the top and the bottom and extending
14 from the rear end toward the front end; and

15 an opening defined in the bottom and communicating with the
16 inner space for the stub of the ratchet mechanism extending out from the opening;
17 and

18 a connecting portion connected to the rear end of the head portion for
19 being attached to the handle of the power ratchet tool.

20 2. The head as claimed in claim 1, wherein the mouth has a length
21 smaller than half of the length of the periphery of the head portion.
